

UniBZ 2009/2010
XML Data Management Lab 4 – 2 NOV 2009

Assignment 2

Write a document using XHTML 1 and CSS 2.

The document should be the CV of a fictional character (or even your own, if you like).

Use a simple text editor to write it, not some publishing software. Use resources available on the web (such as w3.org) to look for the XHTML tags and CSS properties you need.

Make sure the final version validates (use validator.w3.org).

The contents should at least include: headers, paragraphs, some tables, a few lists, a photograph of the CV's author (again, might be fictional) and show off various style sheet capabilities.

Try to do things with generalization in mind. Think about a schema used to define CVs as XML documents. Imagine the XHTML document is automatically produced from such an XML document (although this is not the case yet, it will be a future assignment).

Deliverables:

Please hand-in via e-mail (chris@1006.org) a zip or tgz archive of your files. Alternatively if you happen to have access to a public web server, put your document there and send me the URL.

The deadline is Tuesday 10 NOV 2009.

Regards,
Chris.
