

UniBZ 2009/2010
XML Data Management Lab 6 – 24 NOV 2009

Assignment 3

Write a Java program that outputs a document in MusicML^(*).

The program should instantiate an empty DOM object and add a few nodes following the MusicML DTD. It should then output the resulting MusicML document to a file. Make sure the file validates against the MusicML DTD (run xerces)!

You can hard-code a few notes from a tune you like in the Java source code or use a few random notes.

^(*) see <http://en.wikipedia.org/wiki/MusicXML>

Deliverables:

As usual send the program (just the source code alone) via e-mail to chris@1006.org .

The deadline is Tuesday 8 Dec 2009.

Regards,
Chris.
