

# PostgreSQL

- try out our SQL stuff (trees in SQL)
- learn XML support in a typical relational database
- there is a courtesy SSH Server at  
host: `xml.1006.org`  
port: `1022`  
for you to use (ask me about login & pass)

# Logging in

- Users of Linux, MacOS X or other Unices can just use their terminal and do:

```
ssh -p 1022 login@xml.1006.org
```

- Users of Windows need to get a SSH terminal - PuTTY is a very popular one (no need to install):

```
http://the.earth.li/~sgtatham/putty/latest/x86/putty.exe
```

# Working with PostgreSQL

- connect to the server with `psql`
- read local file with `\i nobel.sql` etc...
- disconnect with `\q`
- close the shell with `exit`
- watch chris ;)
